

UTILITY INSIGHTS

Total Utilities gives businesses a unified view of all their utility data—electricity, natural gas, LPG, waste, and more—bringing every supplier and every site together in one place.

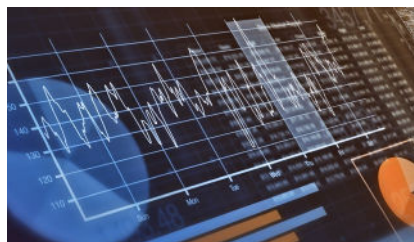

Our core expertise is in:

- Measuring cost and consumption portfolio-wide
- Monitoring spend to support budgeting and procurement
- Minimising costs using detailed performance analytics

INTEGRATED SOLUTIONS

Measure

Gain a unified view of your utility data—electricity, natural gas, LPG, waste, and recycling—consolidated across your entire portfolio.

Monitor

Stay on top of monthly spend, align with annual budgets, & lock in competitive utility contracts timed to market conditions.

Minimise

Compare sites, track trends, and uncover the true cost of operations—especially outside regular business hours.

PROVEN SUCCESS

Horticulture Company

Unified energy and waste data

across multiple suppliers & locations, making carbon reporting simple.

Auckland High School

15+ years of smart budgeting

advice and market-timed contract wins that drive real savings.

International Retail Chain

Energy waste of \$70k per year

identified through out of hours energy usage analysis.

We Help You

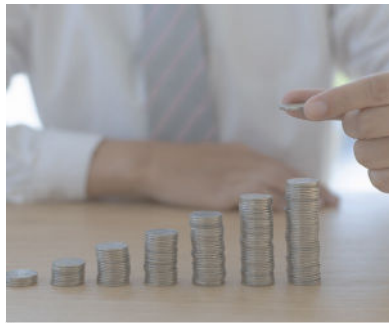

turn all your energy and utilities data into clear, actionable insights so you can control costs, boost performance, and make sharper budgeting and procurement decisions. Our platform streamlines carbon reporting and exposes efficiency wins, helping you save money and shrink your footprint.

Cost and Consumption

Cost Visibility Simplified

Our Utility Insights dashboard gives you clear visibility into your utility costs and usage trends across all sites. It highlights inefficiencies and cost drivers so teams can make fast, informed decisions that reduce spend.

Budgeting

Take Control of Costs

Accurate historical data and forecasting tools help businesses build more reliable utility budgets. Alerts and tracking quickly show when spending moves off target, reducing surprises and improving financial control.

Energy Analytics

Insights that Matter

The dashboard turns complex consumption data into actionable insights like peak loads, anomalies, and operational patterns. These analytics support smarter energy management and efficiency improvements.

Benchmarking

Measure What Matters

Users can compare performance across sites or business units to identify where they excel or fall behind. Clear benchmarking exposes improvement opportunities and guides targeted efficiency actions.

Proactive Procurement

Right Time, Right Price

With clear, actionable usage data at our fingertips, Total Utilities can move faster on market opportunities, helping your business secure competitive contract pricing when the time is right.

Carbon Emissions

Utility Emissions Simplified

Using MfE emissions calculations we show you the environmental impact your utilities use in a clear, transparent way. From working in spreadsheets to a single system of record, Utility Insights supports your sustainability reporting.
